Application No.: PCT/GB03/00697

AMENDMENT TO THE CLAIMS:

1. (Currently Amended) An IR dryer, for use in drying a continuous paper web by means of IR radiation, comprising:

an array of IR emitters arranged, in use, in spaced relation to the paper web; a lamp protection plate intermediate the IR emitters and the paper web[[,]];

<u>characterized</u> characterised in that at least one of the lamp protection plate and the array of IR emitters is curved whereby drying a paper web which moves in a curved path is facilitated.

- 2. (Original) An IR dryer as claimed in claim 1 wherein each of said IR emitters is a lamp comprising a heating element located within a curved quartz tube.
- 3. (Original) An IR dryer as claimed in claim 1 wherein each of said IR emitters is gaspowered.
- 4. (Currently Amended) An IR dryer as claimed in <u>claim 1</u> any of the preceding claims wherein said lamp protection plate comprises an array of curved quartz tubes.
- 5. (Original) An IR dryer as claimed in claim 4 wherein said lamp protection plate is cooled, in use, by the passage of gas, for example air, through said curved quartz tubes.
- 6. (Currently Amended) An IR dryer as claimed in <u>claim 1</u> any of the preceding claims further comprising a curved reflector plate.
- 7. (Currently Amended) An IR dryer, for use in drying a continuous paper web by means of IR radiation, comprising:

an array of IR emitters arranged, in use, in spaced relation to the paper web;

a lamp protection plate intermediate the IR emitters and the paper web[[,]];

<u>characterized</u> characterised in that the lamp protection plate comprises a plurality of quartz tubes arranged in an array.

- 8. (Original) An IR dryer as claimed in claim 7 wherein the lamp protection plate is cooled in use, by the passage of gas, for example air, through said quartz tubes.
- 9. (Currently Amended) An IR dryer as claimed in claim 7 or claim 8 wherein said IR emitters are lamps, each comprising a quartz tube, substantially identical to those used in the lamp protection plate, in which is located in an IR heating element.

- 10. (Currently Amended) An IR dryer as claimed in <u>claim 7</u> any of claims 7-9 wherein said quartz tubes are curved.
- 11. (Currently Amended) A method of bending an elongate quartz tube comprising the steps of:

supporting the tube in a substantially vertical orientation;

gripping the tube near its uppermost end;

heating the tube at region intermediate its lowermost end and the uppermost end; and moving the gripped uppermost end of the tube so that the tube, softened in the vicinity of the heating region, is bent.

- 12. (Original) A method as claimed in claim 11 wherein the gripped uppermost end of the tube is moved in an arc.
- 13. (Currently Amended) A method as claimed in claim 11 or claim 12 wherein the tube is counterbalanced.
- 14. (Currently Amended) A method as claimed in <u>claim 11</u> any of claims 11-13 wherein the lowermost end of the tube is constrained to move in a substantially vertical path.
 - 15. (Currently Amended) Apparatus for bending an elongate quartz tube comprising: support means for supporting the tube in a substantially vertical orientation; gripping means for gripping the tube near its uppermost end;

heating means situated at <u>a</u> region intermediate the lowermost end and the uppermost end of the tube; and

driving means for moving the gripped uppermost end of the tube, in use, so that the tube, softened in the vicinity of the heating means, is bent.

- 16. (Original) Apparatus as claimed in claim 15 wherein the heating means substantially surrounds the tube, in use.
- 17. (Currently Amended) Apparatus as claimed in claim 15 or claim 16 wherein the heating means comprises a plurality of gas burners.

- 18. (Currently Amended) Apparatus as claimed in claim 17 when dependent on claim 16 wherein the plurality of gas burners comprises a ring of gas burners, in the center centre of which the tube is situated, in use.
- 19. (Currently Amended) Apparatus as claimed in <u>claim 15</u> any of claims 15-18 further comprising barrier means which has a curved surface against which the tube may abut, in use, so as to prevent lateral movement of the tube.
- 20. (Original) Apparatus as claimed in claim 19 wherein the barrier means comprises a wheel.
- 21. (Currently Amended) Apparatus as claimed in claim 20 wherein the wheel is removable removeable and replaceable with a wheel of different diameter.
- 22. (Currently Amended) Apparatus as claimed in <u>claim 15</u> any of claims 15-21 further comprising a counter-balance arrangement by means of which the lowermost end of the tube can be constrained in use, to follow a substantially vertical path.
- 23. (Currently Amended) Apparatus as claimed in <u>claim 15</u> any of claims 15-22 wherein said driving means comprises a pivotable arm, at one end of which is situated said gripping means, the arm being pivotable, in use, so that the gripping means generally describes an arc.
- 24. (Original) Apparatus as claimed in claim 23 wherein [[the]] a pivot point of said pivotable arm is, in use, substantially horizontally level with a desired region of bending of the tube.
- 25. (Currently Amended) Apparatus as claimed in claim 23 or 24 wherein said pivotable arm is driven by a motor.
- 26. (Currently Amended) Apparatus as claimed in <u>claim 15</u> any of claims 15-25 wherein said gripping means is water-cooled.
 - 27. Cancelled
 - 28. Cancelled
 - 29. An IR dryer for use in the papermaking industry including comprising:
 an array of curved lamps, each of which lamps includes comprises a an IR heating element

located within a curved quartz tube as claimed in claim 28.

30. An IR dryer as claimed in claim 29 <u>further</u> including a curved reflector plate.

Application No.: PCT/GB03/00697

31. An IR dryer for use in the papermaking industry including comprising:
a curved lamp protection plate which includes comprises an array of curved quartz tubes as claimed in claim 27.
